COURSE PLAN

Introduction of Overhead transmission and underground transmission

Conductors -types of conductors -copper, Aluminium and ACSR conductors -Volume of conductor required for various systems of transmission-Choice of transmission voltage, conductor size -Kelvin's law.

Mechanical Characteristics of transmission lines – configuration-Types of Towers. Calculation of sag and tension-supports at equal and unequal heights -effect of wind and ice-sag template

Insulators -Different types -Voltage distribution, grading and string efficiency of suspension insulators. Corona -disruptive critical voltage -visual critical voltage -power loss due to corona -Factors affecting corona - interference on communication lines.

Overhead line underground cable

Components

- Supports
- Conductors
- Cross arms and clamps
- Insulators
- Guys and strays
- Lightning arrestors
- Fuses and isolating switches
- Vee guards
- Guard wires
- Phase plates
- Bird guards
- Danger plates
- Barbed wire
- Mischallaneous items

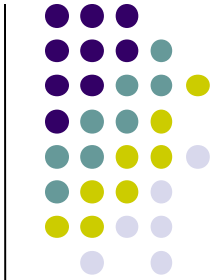
Line supports

- Give the support to the conductors

Requirements

- 1)High mechanical strength to withstand the weight of conductors and wind load etc.
- 2)Light in weight without the loss of mechanical strength.
- 3)Cheaper in cost
- 4)Low maintenance cost
- 5)Longer life
- 6)Good looking
- 7)Easy accessibility for painting & erection of line conductors.

Types



1) Wooden poles

- Cheapest, easily available and have insulating properties.
- Used for distribution in rural areas.
- Double pole structures of A or H type is commonly used.
- Use is limited to low pressures and short spans.
- Tendency to route below the ground level ,causing foundation failure ,in order to prevent this portion of the pole below the ground level is impregnated with preservative compounds like CREOSOTE OIL.
- Comparatively smaller life.
- Less mechanical strength.
- Periodical inspection is required.

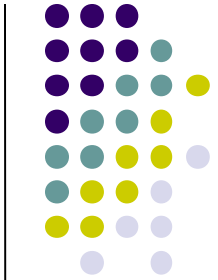
2)Steel Poles

- Possesses greater mechanical strength
- Permit use of longer spans
- Higher cost
- Longer life (can be improved by regular painting)
- Used for distribution purposes in the cities

3 types

- Tubular poles
- Rail poles
- Rolled steel joists

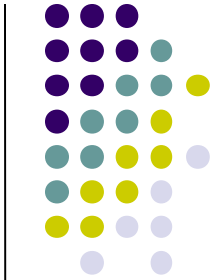
3)Reinforced Concrete Poles



- RCC poles,used for low voltage and high voltage distribution upto 11 kV
- Greater mechanical strength,longer life,permits longer spans
- Giving good look
- Require little maintenance
- Good insulating properties
- Very popular

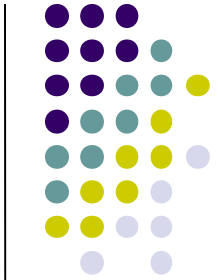
Wooden, steel, RCC poles are used for distribution purposes at low voltage up to 11 kV

4)Lattice steel towers



- Employed for long distance transmission at high voltage
- Greater mechanical strength
- Longer life
- Permitting longer spans

Conductor materials

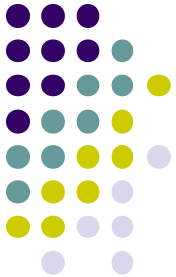


- Carry electric power from sending end station to receiving end station

Characteristics

- high electrical conductivity
- high tensile strength
- low specific gravity in order to give low weight per unit volume
- low cost in order to be used over long distances
- easy availability
- should not be brittle

Common materials used



1)Stranded hard drawn copper

- high electrical conductivity
- high tensile strength
- high current density
- durable, having high scrap value
- long life
- higher cost & non availability

2)Aluminum

- cheapest in cost & lighter in weight
- poor conductivity & tensile strength
- low melting point, can't withstand short circuit

TYPES

- Aluminum Conductor Steel Reinforced (ACSR)
- All Aluminum Conductor (AAC); It is used in construction that requires good conductivity and short spans.
- All Aluminum Alloy Conductor (AAAC) :It is stronger than ACSR, and lighter, but more expensive. It is used for long spans in corrosive environments.

3)Steel Cored Aluminum (ACSR)

- high tensile strength, lighter in weight
- produces small sag , longer spans can be used
- reduced corona losses, reduced cost
- saving in maintenance cost

4)Galvanised steel

- for longer spans or for short lines exposed to normally high stresses.
- used for supplying in rural areas & operating at voltages about 11kV
- Not suitable for EHT lines

6)Copper clad steel

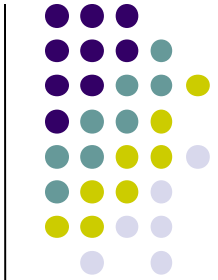
- Welding a copper coating on steel wire
- large tensile strength
- for longer spans

7)Phosphor bronze

- Phosphor bronze added to cadmium copper
- useful for long spans and when harmful gases like Ammonia is present in the atmosphere.

The most common type of transmission conductor is ACSR. ACSR consists of one or more layers of aluminum strands surrounding a core of 1, 7, 19, or 37 galvanized steel strands

Conductor configurations and spacing

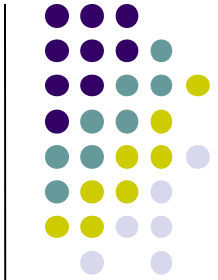


- Horizontal, vertical & triangular configurations
- Spacing =√S +V/150 m

  S =sag in meters

  V =line voltage in kV

Span length



- With wooden poles :-(40-50)m
- With steel tubular poles :-(50-80)m
- With RCC poles :-(80-200)m
- With steel towers:-(200-400)m&above

Vibration & Dampers

- There will be vibrations in an overhead line in the vertical plane.That may be due to

  - normal swinging in the wind

  - high frequency vibrations/resonant vibrations(20-50mm,5-100Hz)

  - low frequency vibrations/galloping/dancing(6m,1Hz)

- Simple swinging is harmless provided the clearance is sufficiently large.
- Low frequency vibrations occur during storms or with a strong wind.The conductors are said to dance.There is no method for preventing these vibrations.

- Danger can be reduced if horizontal conductor configuration is used.
- The conductors are protected by dampers for preventing resonant vibrations
- Damper means two weights attached to apiece of stranded cables,clamped to the conductor.Energy of vibration is absorbed by the stranded cable.

Cross arms

- To keep the conductors at a safe distance from each other and from the poles
- Also used for to support the insulators
- Types are MS-Channel,U-shaped,V-shaped, Zig-zag

Insulators

- For supporting the conductors
- May be pin, strain ,suspension type

Guys and stays

- Cables to resist lateral forces

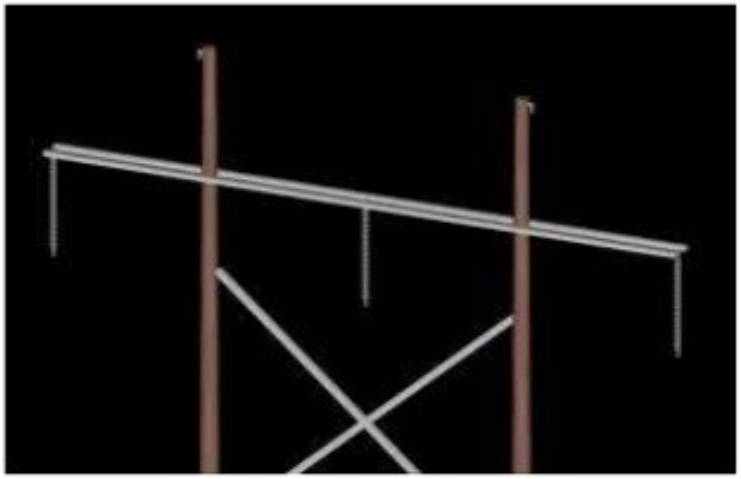
Lightning arrestors

- To discharge excessive voltage on the line to earth, due to lightening

Fuses & Isolating switches

- To isolate different parts

2. CROSS ARM AND CLAMP

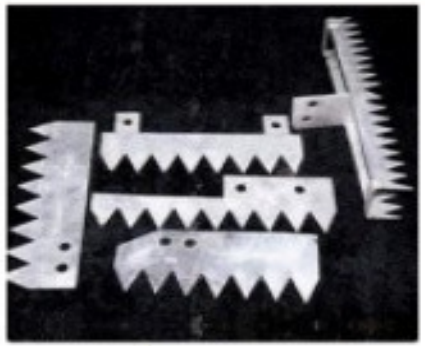


9. GUARD WIRE

When a power line, telephone or telegraph line crossing, and then find the line that connects the top and bottom of the Earth Wire is used to guard.

10. BIRD GUARDS

It is created on the side of the saw teeth as long ebonite basest plate, which is a cross - is prevented in the presence of arm insulator. The birds of hokier cross - in the arm and conductor Flash - Over in the out .



- **Vee-guards**
  - Provided under the bare overhead line running across the public streets to make the line safe if it should break

- **Guard wires**
  - Provided above or below the power lines while crossing telegraph and telephone lines

- **Phase plates**
- **Bird guards**
- **Danger plates** – provided at a height 2.5m from the ground as a warning measure

- **Barbed wires –** to prevent climbing by unauthorized persons
- **Mischallaneous** items-vibration dampers, beads for jumpers etc…

Clearance from ground

- for low, medium & high voltage lines (up to 11kV) =13ft /15ft
- for high voltage lines =17ft

Clearance from buildings

- for low & medium voltage lines =8ft vertical distance &4ft horizontal distance
- For high voltage &EHT lines = 12ft(upto &including 33kV), 6ft horizontal distance

Maximum interval between the supports

- for low & medium voltage lines the distance does not exceed 220ft(67.05m)

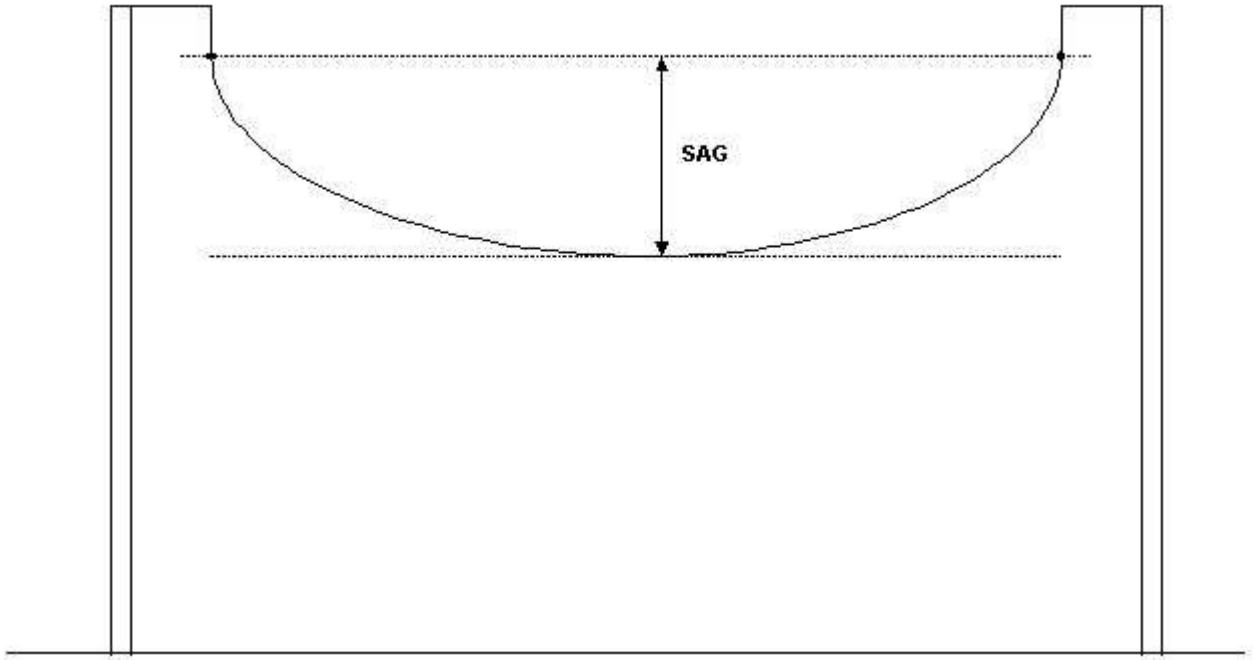
Sag and Tension

-The difference in level between points of supports and lowest point on the conductor is called sag.

- Conductor is acted by the forces such as weight of the conductor,wind pressure and tension etc…
- The tension ion the conductor is expected to be less than 50% of its ultimate tensile strength.
- When the conductor is suspended between 2 supports at the same level it takes the shape of a catenary.
- If the sag is very small compared with the span ,sag-span curve will be a parabola.

- Tension on the conductor acts tangentially.Tension To at the lowest point O act horizontally.This horizontal component is constant throughout the length of the wire.
- Tension at the supports is approximately is equal to the horizontal tension acting at any point on the wire.
- Tension in the conductor depends on diameter of the conductor, length of the conductor between the supports, material,sag,wind pressure & temperature.

SAG



Factors affecting sag

- Weight of the conductor- heavier the conductor greater the sag
- Length of the span – sag is proportional to square of span length
- Working tensile strength

  $$= \frac{\text{ultimate stress} \times \text{area of cross section}}{\text{factor of safety}}$$

  sag is inversely proportional to Working tensile strength of the conductor
- Temperature – sag increases with rise in temperature

Calculation of sag

- A sag is so adjusted that tension in the conductor is within the safe limits
- The tension is due to conductor weight, effects of wind, ice loading and temperature variations
- Keeping the tension less than 50% of its ultimate tensile strength ie minimum factor of safety in the conductor tension is **2**

Cases

- 1)When supports are at equal levels

_If l=length of the span,

w =weight per unit length of the conductor,

T = tension in the conductor

$$T \times y = wx \times x/2$$

- $\longrightarrow \quad y = \frac{wx^2}{2T}$

This is the maximum value of sag at either the supports A or B

$$x = l/2, y = S$$

$$S = \frac{w(l/2)2}{2T} = \frac{wl^2}{8T}$$

- If l =span length

  h = difference in levels between 2 supports

  x1 =distance of support at lower level from O

  x2 = distance of support at higher level from O

  T = tension in the conductor

  w = weight per unit length of the conductor

$$y = \frac{wx1^2}{2T}$$

At A $x = x1, y = S1$ $\Longrightarrow$ $S1 = \frac{wx1^2}{2T}$

& $S2 = \frac{wx2^2}{2T}$

TALK ON TECHNICAL ASPECTS OF CIAL.

The talk covers the technical aspects of the International and domestic terminals of Cochin International Airport Limited. CIAL has three terminals. With the commissioning of Terminal 3, Cochin Airport became India's 4th largest airport after Delhi, Mumbai and Kolkata with a very large built up area for commercial operations. It was a highly informative talk done by Mr. A.C.K Nair, Director of CIAL .

AN INDUSTRIAL VISIT TO UDUPI POWER PLANT.

The sixth semester students went for an Industrial Visit organized by the Electrical & Electronics Engineering Department to Udupi Power Plant on 12-03-2018. Udupi Power Corporation Limited is a 2 X 600 MW imported coal based power project in the Udupi District of Karnataka.

TALK ON ELECTRICAL ENGINEERING TODAY AND TOMORROW BY THE RESOURCE PERSON Er.SHAJI JACOB , CHARTERED ENGINEER AND ENERGY CONSULTANT, HELD ON 27/11/2018

TALK ON AUTOMATION

Graphene automation private. Ltd.(GAPL) is a company managed by professionals in Electrical, Instrumentation, Automation and Control Engineering. The session conduced on 21/2/2019 included talks on electrical automation solutions, process control, automation etc.

COURSE DIARY- THEORY

KMEA ENGINEERING COLLEGE, ERNAKULAM

Kerala. PIN: 683561

Website: http://kmeacollege.ac.in/

GENERAL INSTRUCTIONS

- Student performance should be evaluated solely on an academic basis.
- Student's evaluation should be fair, consistent, transparent and accountable.
- Evaluation of students' performance should be disclosed to the students.

1. Keep the Course Diary up to date by clearly indicating the subject coverage and students attendance on the relevant pages.
2. Paste the syllabus in the relevant page.
3. Write / paste the Course plan in the relevant page.
4. Events in a semester such as Series Test days, Cultural / Celebration days, days for extra / co-curricular activities etc. may be indicated in the Year Calendar.
5. Assignment details may be written in the Course Diary or may be filed in the Course File.
   (i)Minimum 3 no. of assignments should be given.
   (ii)Different sets of questions may be given in an assignment (at least three) to a class.
   (iii)Assignments may be in the form of written - closed / open book, individual / group, home assignment, or in the form of oral presentation, quiz, seminar etc.
6. Follow KTU regulations for computing sessional marks.
7. Show complete split up of sessional marks. Final sessional mark for each student should be equal to the sum of marks awarded for Assignments (10) and Series Tests (40).
8. All the entries in the course diary must be, legibly written without overwriting and free of errors.
9. Do not count marks of class tests along with the series test for computing sessional mark.
10. The staff member will be responsible for the safe custody of the Course Diary and (s)he should return it to the HOD at the end of semester or earlier if (s)he leaves the department or discontinue the subject.

SYLLABUS

Course code	Course Name	L-T-P -Credits	Year of Introduction
CS202	Computer Organization and Architecture	3-1-0-4	2016

Pre-requisite: CS203 Switching theory and logic design

Course Objectives

1. To impart an understanding of the internal organization and operations of a computer.
2. To introduce the concepts of processor logic design and control logic design.

Syllabus

Fundamental building blocks and functional units of a computer. Execution phases of an instruction. Arithmetic Algorithms. Design of the processing unit – how arithmetic and logic operations are performed. Design of the control unit – hardwired and microprogrammed control. I/O organisation – interrupts, DMA, different interface standards. Memory Subsystem – different types.

Expected outcome

Students will be able to:

1. identify the basic structure and functional units of a digital computer.
2. analyze the effect of addressing modes on the execution time of a program.
3. design processing unit using the concepts of ALU and control logic design.
4. identify the pros and cons of different types of control logic design in processors.
5. select appropriate interfacing standards for I/O devices.
6. identify the roles of various functional units of a computer in instruction execution.

Text Books:

1. Hamacher C., Z. Vranesic and S. Zaky, *Computer Organization* ,5/e, McGraw Hill, 2011.
2. Mano M. M., Digital Logic & Computer Design, 4/e, Pearson Education, 2013.

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

PROGRAM OUTCOME(PO)

PO 1: Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO 2: Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO 3: Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO 4: Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO 5: Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

PO 6: The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO 7: Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO 8: Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO 9: Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO 10: Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO 11: Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO 12: Life-long learning: Recognize the need for, and have the preparation and ability to engage in ndependent and life-long learning in the broadest context of technological change.

CS202 Computer Organization and Architecture

CS202.1. Identify the basic structure and functional units of a digital computer.

CS202.2. Analyze the effect of addressing modes on the execution time of a program.

CS202.3. Design processing unit using the concepts of ALU and control logic design.

CS202.4. Identify the pros and cons of different types of control logic design in processors.

CS202.5. Select appropriate interfacing standards for I/O devices.

CS202.6. Identify the roles of various functional units of a computer in instruction execution.
